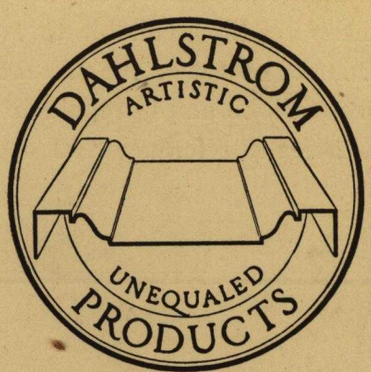
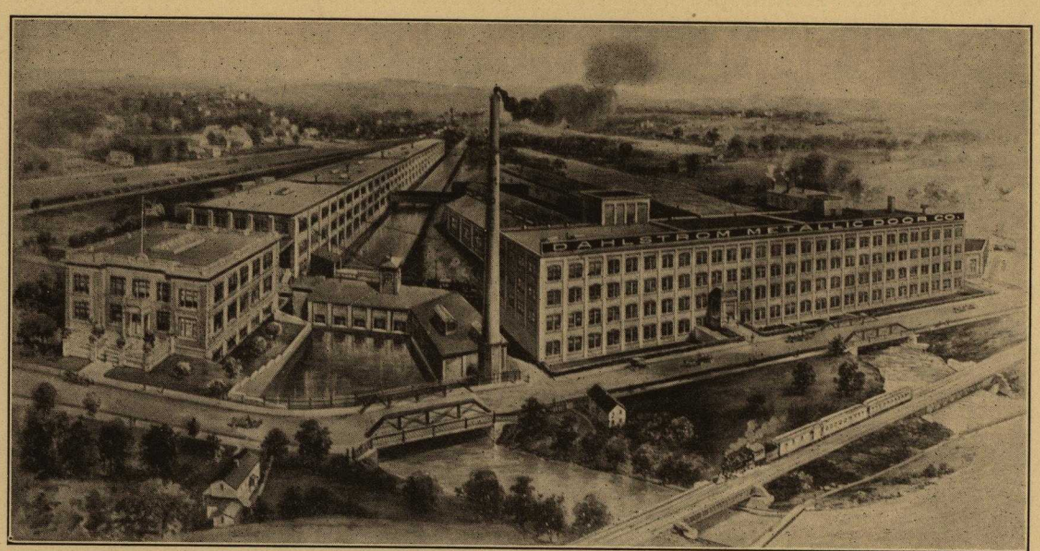
METAL MOULDINGS AND SHAPES



DAHLSTROM METALLIC DOOR CO
JAMESTOWN NEW YORK

FOREWORD

SINCE our introduction of cold drawn metal mouldings, the usefulness of this product has extended into almost every kind of manufacture. To make our experience and facilities readily available to every possible user is the object of the present catalog. Our efforts will be amply repaid if you find this book a ready reference and of value in your work.



THE HOME OF THE DAHLSTROM PRODUCTS—*AT YOUR SERVICE*

Largest plant in the world for the exclusive manufacture of Quality Cold-Drawn Mouldings
Hollow Metal Fireproof Doors, Windows and Accessories

EXECUTIVE OFFICES AND FACTORIES:

JAMESTOWN, N. Y.

BRANCH OFFICES: NEW YORK, PHILADELPHIA, CHICAGO and DETROIT

REPRESENTATIVES IN PRINCIPAL CITIES

DAHLSTROM QUALITY MOULDINGS

Arrangement. This Catalog of Cold Drawn Metal Mouldings and Shapes, which we now take pleasure in presenting to the architectural profession, the metal and specialty trades, is the result of a careful study to obtain the most orderly arrangement. It contains complete information regarding gauge of metal used, weight of section, sizes, prices, etc., and should provide a quick reference to any class of mouldings desired. The related classifications are grouped into sections in such a way that subsequent sheets, which will be published from time to time, can be readily inserted.

Accuracy. The cuts of the different shapes are in full size and show *exactly what we are ready to supply* on short notice. Corners and angles are shown sharp or slightly rounded, *just as produced in the dies, and each dimension and contour is faithfully reproduced.* The right hand side of cuts indicates the face or finished side of mouldings.

Quality and Characteristics. The Dahlstrom Mouldings are produced from high grade steel, brass, bronze or copper, by the cold drawn process originated by the founder of this company, and later developed and perfected by us. *They are distinguished for their bright, smooth surfaces, their true outlines and their sharp and well defined corners and angles.* They are light in weight, yet very stiff, because of their special treatment.

Uses. Manufacturers of Ornamental Iron Work, Stairs, Elevator Enclosures, Store Fronts, Grille Work, Bank and Office Screens, Metal Furniture and Lockers, Automobile Bodies and Equipment and kindred industries, will find it both convenient and profitable to take advantage of our facilities and services in this line.

Application. Our mouldings can generally be attached to other work by the concealed method—tapping for machine screws into blocks or angles fastened on the back side of the mouldings. Where this is not convenient a special small oval head machine screw can be used through the face of the moulding, as illustrated on Auxiliary Sheets A and B, Section 5. In some instances countersunk rivets can be used to advantage.

Equipment. Our extensive equipment insures prompt delivery of your order. Most of the drawn shapes shown can be furnished in lengths up to 40 feet, but to avoid the extra rate of freight, the regular shipping length is usually 20 ft. or shorter. Our Moulding Department is well equipped for cutting mouldings and shapes to desired lengths (square or mitred) at a slight additional cost. Mouldings can be made with returned ends, bent to desired shapes, or made up in frames, with all joints process welded and thereby made invisible.

SPECIAL AND PRESSED SHAPE INFORMATION

Orders or requests for estimates on pressed shapes should include the following information:

1 Sketch illustrating shape and giving complete dimensions.
2 Kind of metal desired (steel, brass, bronze or copper).
3 Gauge or thickness of metal desired.
4 Specify our shape number or combination of shape numbers whenever possible.

Press Work. Our equipment also includes heavy presses, both hydraulic and motor driven, for forming to almost any special shape any gauge metal up to three sixteenths of an inch in thickness and eight feet in length. See Section 9 for some of the designs of press shapes which can be furnished on short notice.

Special Mouldings and Shapes. A thoroughly equipped tool department and a corps of skilled artisans are at your service when individuality of moulding design or special shapes are desired. Quotations will be furnished upon request.

TELEGRAPH CODE

To save expense, to expedite ordering and for the convenience of our patrons we have arranged a code word for each of our mouldings. In addition to the moulding numbers code, we list below a brief General Code, covering miscellaneous instructions and questions relative to ordering and shipping of mouldings.

In telegraphing an order for mouldings, start with the code telling us how to ship. Then give the quantity of lineal feet required, then the metal desired, then the code word for the moulding or mouldings wanted.

The following will illustrate how to send in an express order for 1,000 feet of each of bronze moulding numbers 295 and 748.

Baterig, one thousand feet each, bronze cook and hero.

ORDERS

BATERIG	1—Ship to me (us) immediately by express————
BATERKLEUR	2—Ship by express immediately to ————
BATERMOLEN	3—Ship to me (us) by freight————
BATEROKER	4—Mail immediately by Parcels Post————
BATERAL	5—When and how *did* you ship moulding or mouldings called for in our communication of————
BATERPOOL	6—When and how *will* you ship moulding or mouldings called for in my (our) communication of————
BATERSTEEN	7—Add to my (our) order, letter or telegram of————
BATERK	8—When and how will you ship moulding or mouldings called for in my (our) order number————
BATISH	9—Cancel order for moulding or mouldings in our (my) communication of————
BATFLUTCH	10—Cancel moulding number or numbers———— from my (our) order, letter or telegram of————

QUOTATIONS

BATGELD	1—Quote *by wire* best price f. o. b. your factory————
BATGICH	2—Quote *by wire* best price f. o. b. your factory, and best delivery————
BATKIEMER	3—Wire when and at what price you can ship f. o. b. your factory material per our inquiry of————

All prices are f. o. b. factory, unless otherwise specially arranged.

Orders for any mouldings shown in this catalog can usually be shipped within a week after receipt, but if for any reason there should be any delay the customer will be advised of the fact.

All orders for mouldings will be made up in Steel, unless otherwise specifically stated in order.

All goods are carefully packed to insure safe delivery, but our responsibility ceases on delivery of the shipment to the railroad company and obtaining their receipt for the goods in good condition.

SERVICES AND GUARANTEE

Samples will be sent upon request to convince interested parties of the superior quality of the Dahlstrom Mouldings. We shall appreciate an opportunity to demonstrate that our facilities and ability *to serve* our customers are also unexcelled. Our standing guarantee is that your orders will receive prompt and careful attention and will be executed to your entire satisfaction.

TABLE OF METAL GAUGES AND WEIGHTS

Decimal Gauge	Fraction of Inch	APPROXIMATE WEIGHT PER SQUARE FOOT				NEAREST GAUGE NUMBER

.125	1-8	5.104	5.459	5.636	5.781	11	—	—

Authority. The above table has been computed from weights of metals given in Cambria Steel Company's Hand Book and is based on the following:

Steel —Weight per cubic ft. 490 pounds
Brass — " " " " 524 "
Bronze — " " " " 541 "
Copper — " " " " 555 "

Composition. Our standard composition for bronze is 90% copper, 10% spelter or zinc.

Weight of Metal. To find the weight per square foot of any gauge in steel, brass, bronze or copper, multiply the decimal thickness of the metal by one of the constant multipliers listed below:

Steel.....40.83
Brass.....43.67
Bronze.....45.083
Copper.....46.25

EXAMPLES: *What is weight per sq. ft. of .050" steel?*

.050" steel x 40.83=2.042 weight in lbs. per sq. ft. of .050" steel. (*Answer.*)

What is weight per sq. ft. of .072" brass?

.072" brass x 43.67=3.144 weight in lbs. per sq. ft. of .072" brass. (*Answer.*)

Weight of Mouldings. The weight in steel per lineal foot of every moulding shown in this catalog is given on the same page with the illustration.

To find the approximate weight per lineal foot of any of our mouldings in brass, bronze or copper, multiply the weight given for the steel moulding by one of the constant multipliers listed below:

Brass.....1.07
Bronze.....1.104
Copper.....1.133

EXAMPLE: *Moulding No. 816 (shown in Section 1, Page 1) weighs .5100 lbs. per lineal ft. in steel. What is weight per lineal ft. in brass?*

.5100 x 1.07=.5457 weight in lbs. per lineal ft. of No. 816 moulding in brass. (*Answer.*)

Dahlstrom Products

Product. The Dahlstrom Products are so well known as to need no extended mention. In addition to mouldings they include everything required for the completion of the interior fireproofing of any building, and are made from steel, brass, bronze or copper, in any design and in accordance with architect's details.

Hollow Metal Doors. Hollow Metal Fireproof Door Construction was originated and developed by us. The original idea was extended to other features as soon as its success was demonstrated. The construction of the Dahlstrom Hollow Metal Doors is the simplest and lightest, yet the strongest of any. We have carefully covered with patents all those special features of manufacture employed by us to produce strength with minimum of weight. The connections between the different members are rendered entirely invisible by special methods and process welding with no danger of eventually opening up. The elimination of all combustible material and the scientific construction, which was thoroughly studied and tested before it was adopted, has given our work durability and fireproof qualities never yet equaled by any other make.

Contracts are solicited for f. o. b. factory shipments as well as for work installed.

Frames. The jambs and heads are shipped "knocked down", to allow necessary adjustment to the rough openings in the buildings. The joints in the mitred corners of the casings are all welded continuously, by which the joints are made unbreakable and invisible.

Elevator Enclosures. The fireproofing logic upon which metal finish is mainly based is the fact that it converts an office, compartment, floor or unit into virtually a separate and distinct building. To completely carry out this principle, elevator shafts and stairways must also be thoroughly protected from the spread of fire, which cannot be done with the open grille work once commonly used. The Dahlstrom Products have been developed to include fireproof elevator enclosures adaptable to every requirement for safeguarding vertical shafts or stairs.

Office Partitions. The Dahlstrom Hollow Metal Partitions are used for the sub-division of offices at a minimum consumption of space. They are made with or without glass panels, are fireproof and easily adapted to suit varying requirements. The sections are made interchangeable and can readily be taken down, re-arranged and erected in a different location if desired.

Special Frames for Hospital Doors. A specially constructed door buck and jamb for hospital buildings has been developed and added to our standard products. It is made of heavy steel plate, formed to suit varying requirements. The method of anchoring these frames to the partitions has been tested and found the most reliable of any. Extended flanges serve as finish, and no casing is required, unless desired. The corners are acetylene-welded, making rigid and tight joints that cannot open up.

Finish. The elegant finish for which the Dahlstrom Products are noted is the result of the most careful selection of the ingredients used in the enamel, the chemical properties of which have been carefully tested for final and lasting results. These facts, together with expert workmanship and careful baking of each coat, insure a durable, elastic finish that is artistic, sanitary and satisfactory in every way. We reproduce perfectly, natural wood or metallic finishes in any color.

Underwriters' Approval. The Dahlstrom Doors have been tested and approved by the National Board of Fire Underwriters of Chicago as well as by the British Fire Prevention Committee of London, England. The building departments of the larger cities in the United States have also given our work their approval.

Facilities. Our new factory, illustrated on page three, has a floor space of nearly a quarter million square feet. In addition to a regular equipment we own and operate machinery specially designed and built for hollow metal door work and accessories which has enabled us to develop the different products to the highest degree of construction, workmanship and finish.

Guarantee. The Dahlstrom Metallic Door Company guarantees all materials and workmanship used in the manufacture and construction of its product to be of the very highest quality and that the work installed by them will be fully satisfactory in every detail.

To Architects. We consider it a privilege to co-operate with architects, and will submit drawings for their approval from any rough sketches or suggestions which they may furnish.

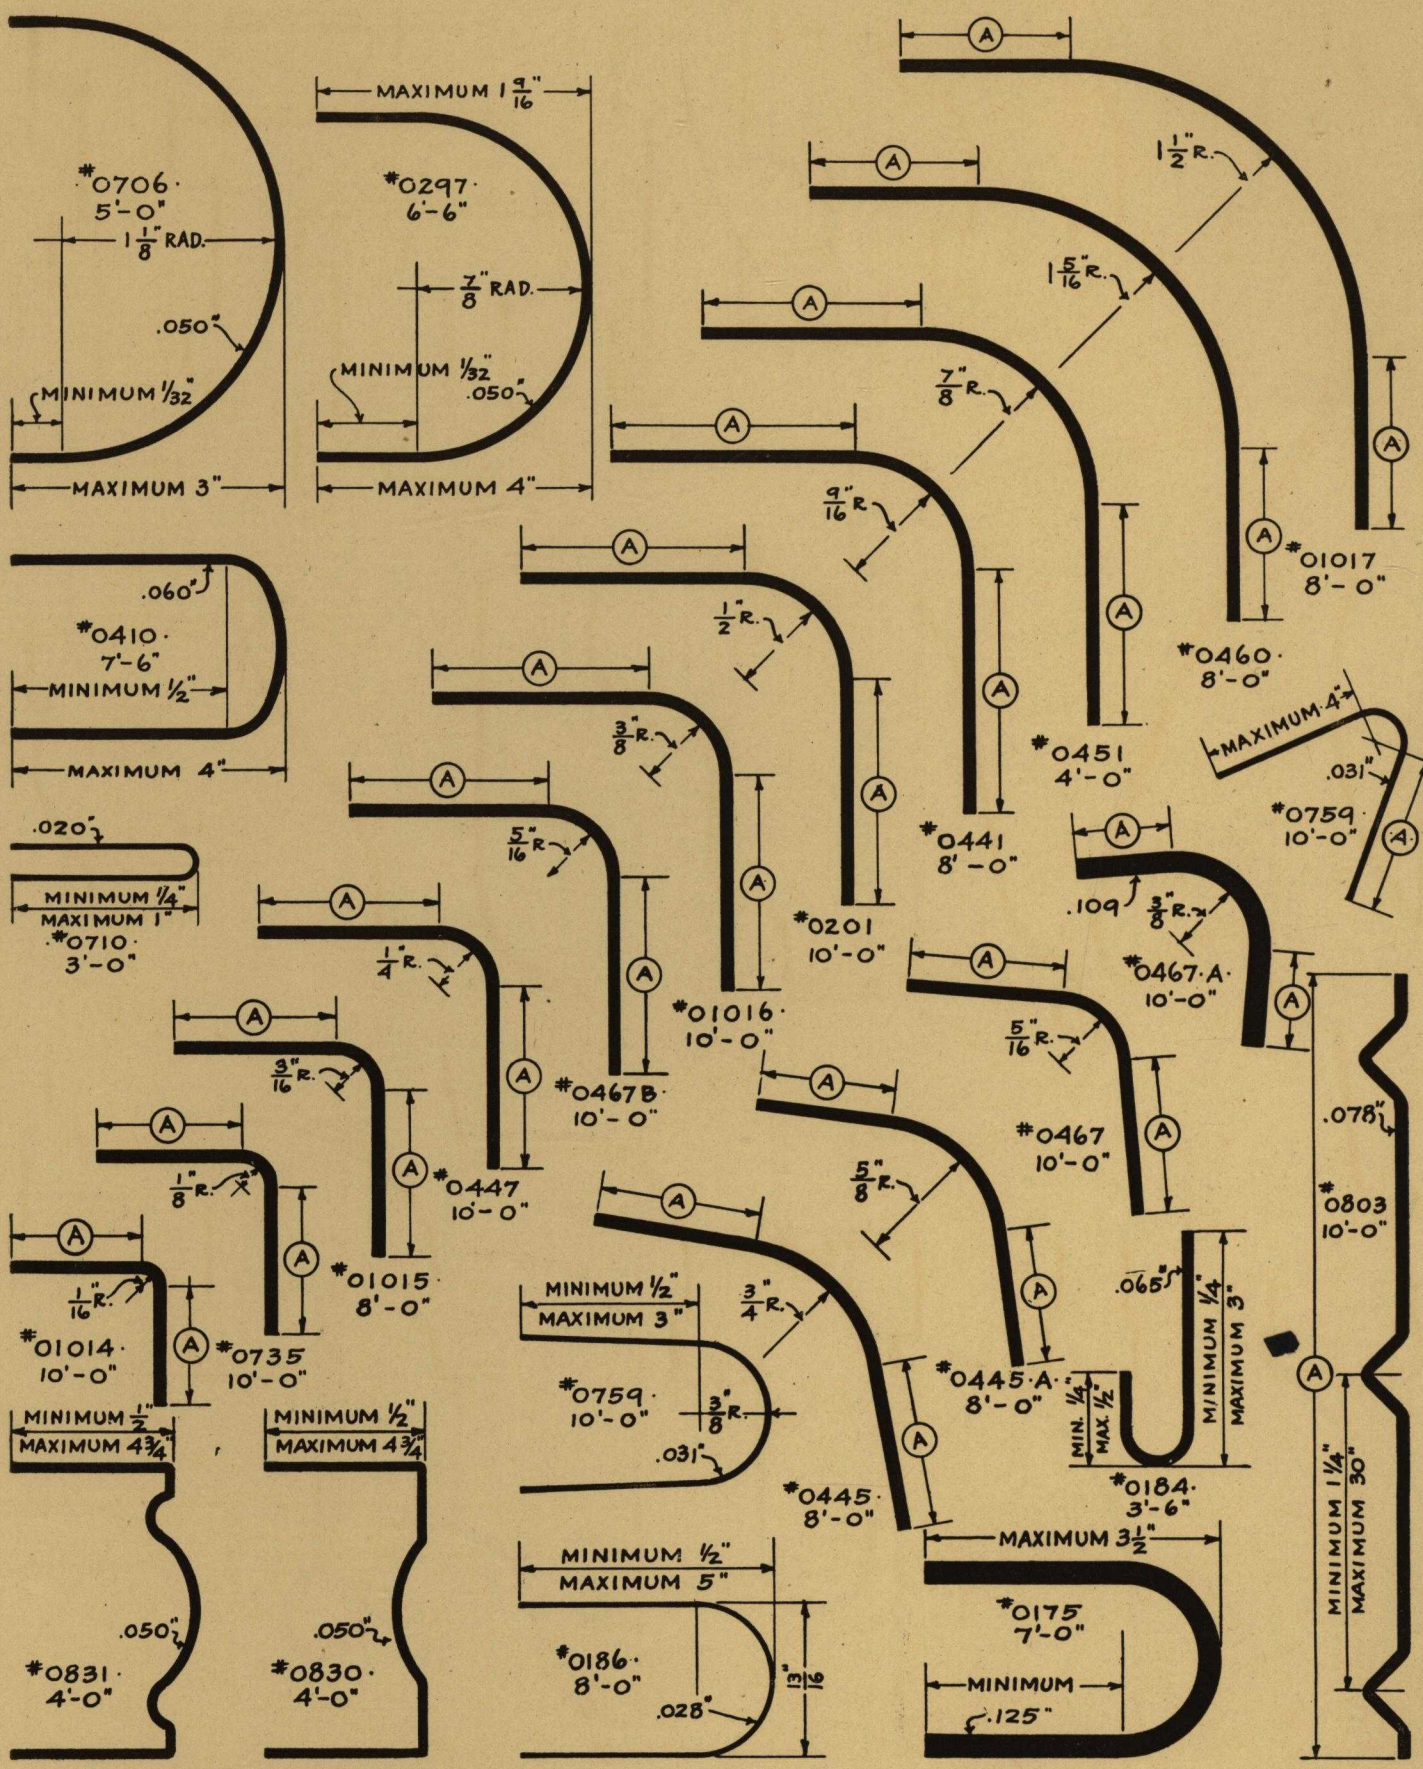
Invisible Mitres Produced by Our Welding Process



Important Note: See "Pressed Shape Information" given on page 4 of the Introduction.

Contours of shapes are illustrated full size. Measurements marked "A", unless otherwise limited, can be made any dimension required that does not exceed obtainable width of metal stock. Length given under the shape number indicates the present length of the dies.

For pieces longer than the dies there will be a special charge. Our presses will accommodate dies up to 10′-0″ in length.

Most of the sections shown specify the *only* thickness of metal in which the shape can be made. Where thickness is not specified, shape can be obtained in any gauge stock not heavier than No. 10.

PRESSED SHAPES

NOTES.

1. Order Pressed Channels No. V-1 to No. V-54 by number.
2. Specify metal desired. (Steel, brass bronze, or copper.)
3. Specify gauge number or decimal thickness in inches of metal desired. (Decimals shown under shape numbers indicate the greatest thickness of metal in which each channel can be furnished. Thinner metal can be used.)
4. Specify lengths desired. (Limit to 8′-0″ if possible.)
5. Orders or requests for estimates on pressed channels greater than 1″ x 1″ and of heavier gauge metal than shown should state the kind of metal, gauge and lengths desired, also send sketch giving dimensions. (Pressed channels from stock dies not obtainable when length of leg exceeds width of channel.)
6. We can fill orders for any pressed angle with short leg not less than minimum dimensions shown.
